

The most powerful air cleaning system ever.

BioOx® are small bio-reactors that sit discretely in the corner of the room and plug into standard electrical outlets. They contain a mixture of plain water and natural enzymes. Within just a matter of hours of turning on your bio-reactor your air will be cleaner and healthier, and feel fresher as a variety of harmful particles are removed.

Other machines filter, our systems **scrub**.

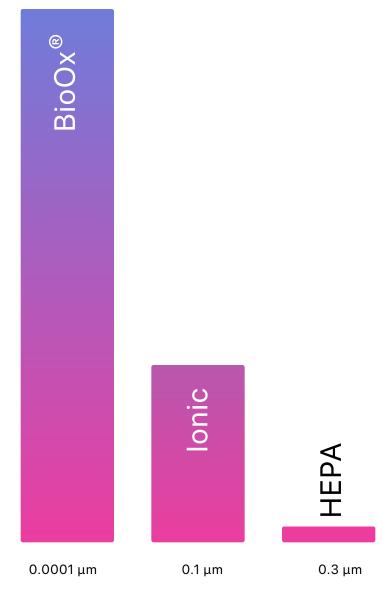

Using our patented biotechnology, our freestanding BioOx units use natural enzymes to neutralize harmful airborne toxins and pathogens.

BioOx units draw in all forms of contaminants, expelling clean air and making your facility a healthier and more enjoyable place to be.

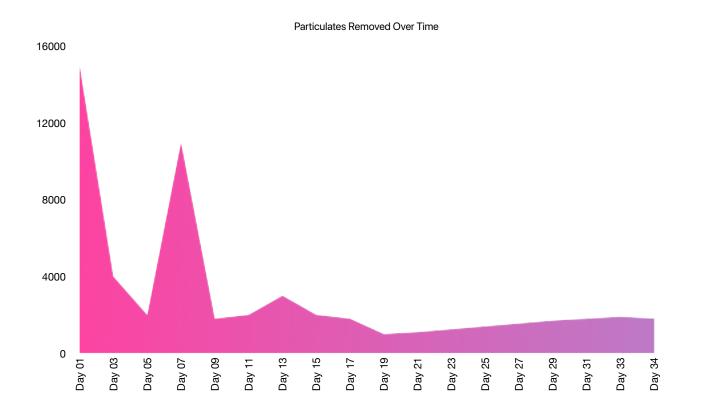

Traditional HVAC systems are expensive and just move harmful air around. UV lights work but only affect living microorganisms, meaning these systems can't control dust, pollen, pet dander or other particles that aren't alive.

BioOx systems actually clean the air, by capturing particulates within a specialized all-natural enzyme and microbe solution, rendering contaminants like dust, ammonia, formaldehyde, bacteria and viruses harmless. Installing a BioOx air purification system provides a "clean air zone" throughout your facilities.

Best of all, no filters are needed and absolutely no drilling, rewiring or construction of any kind is required.

Filtering performance - BioOx® vs Ionic vs HEPA (Longer is better)

Airborne pathogens? Not with us there isn't.

BioOx® solution significantly reduces viral and bacterial pathogen concentrations.*

In a study conducted at a hospital in Saronno, Italy, our bio-reactor reduced the airborne microbial population and particulate matter (PM) in hospital visiting rooms and attached waiting areas.

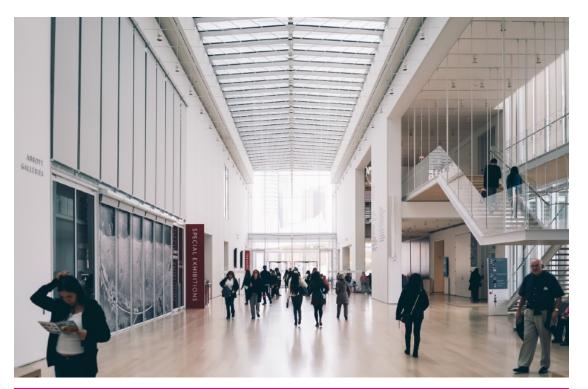

From urgent care to hospital, BioOx scales with you.

Whether you're running a local dentist office, urgent care or the largest healthcare network in your region, BioOx systems offers a system that fits your air cleaning needs.

From the compact and efficient 85 series to the titan class 5000 series, our systems can grow as your healthcare operation does the same.

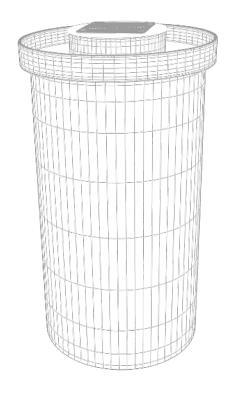

Get your seal of approval... ours.

For a limited time, we are **certifying healthcare locations** that install the
appropriate BioOx Unit(s) with certification
and signage that can be displayed at your
location so your patients know you're
making **huge strides** to ensure their safety
as well as your own.

Technical Specifications

^{*} A larger unit may be necessary if severe levels of continuous contamination are sustained regardless of area of influence.

| Nominal contaminant destruction, lbs/day | 10 | 20 | 40 | 200 |
|--|--------------|-------------|--------------|--------------|
| Area of influence* square feet | 600 | 1500 | 3000 | 6000 |

Filtering Method

Filtering Abilities

Electrical and Operating Requirements

Installation and Maintenance

- Convection

- Molecular charge attraction

- Bio-oxidation

Captures all sized particles including but not limited to allergens, bacteria, odors, viruses, germs, cigarette smoke, all forms of chemical and biological fumes.

Line voltage: 100–240V AC Frequency: 60Hz, single phase

Operating temperature: 50° to 95° F (10° to 35° C)

Relative humidity: 0% to 100%

Installation and set up for each unit is under an hour. Depending upon your pollution levels, maintenance of the units is required every one to three months. Addition of BioOx Media is required every month. And, a constant water level must be maintained.
